Project 2 -- is good but does it meet the syllabus requirements...

one unknown algo on known dataset, one known algo on unknown dataset and class project.

You can combine P-1 and p-2 to be the class project.

regards
Raman

Hi Raman,

Reading:

Taking courses at <https://work.caltech.edu/telecourse.html>
as I think I need more background knowledge in ML.

About Sentiment Analysis which I am thinking to apply from my project-1 to Project-2 as they may be related.
<https://www.amazon.com/Sentiment-Analysis-Opinions-Sentiments-Emotions/dp/1107017890>
Just start reading the book and papers in the book.

Project-1:

I am successfully using R to load data (6k) from twitter, pre-process them into dataset, do topic modeling with LDA(Latent Dirichlet Allocation) and start running spherical K-means on the clean dataset. Further progress will be on the visualization how to present the results in a meaningful and clear views.

Idea of project-2:

Continue on the dataset from LDA in Project-1, I may do opinion summarization and search, the analysis of comparative opinions. How does that sound?
